

Padma's Plantation®

Green Facts

- Almost 80% of our product is made using eco-friendly resources such as bamboo, rattan and abaca
- We focus on using as much of the plants as possible, which results in minimal waste
- Weaving materials that we use, such as sea grass, abaca, banana and field grass, re grow in a year or less, making it very sustainable
- When shipping to furniture market shows throughout the year, we utilize blanket wrapping. This prevents us from wasting cardboard, etc. to wrap the items. It also allows to fit items more compactly - potentially allowing us to use a lesser vehicle or less trips. We also use single-face cardboard that is wrapped tightly to the product's shape versus putting the item in a box, which promotes less waste of material. Recyclable cardboard is our primary packaging source
- We also almost never box our items individually from the factory to maximize the number of items we can get into a container. This results in less containers brought in by us from overseas which equals less gas/transportation resources being used – ultimately preventing unnecessary damage to the environment
